

It's LipoSelection[®], *not liposuction*

NEW: LipoSelection	OLD: liposuction
Ultrasound based Tissue selectivity (leaves important tissues largely intact) results in: Smooth contouring Low to minimal pain Resume activities quickly Minimal swelling and bruising Gentle wrist motion by surgeon: Precise sculpting and contour finesse Designed to treat common as well as delicate areas such as arms, chin, neck, knees, and inner thighs; and fibrous areas such as the back	Suction based Tissue damage (inability to differentiate fat from nerves, blood vessels, connective tissues) results in: Potential for uneven results Potential for painful recovery Potential for lengthy recovery Potential for swelling and bruising Large, "mechanical" arm movement by surgeon: Difficult to achieve sculpting Commonly used on abdomen, thighs, hips, and love handles (elevated risk when treating delicate areas)

Physicians in your area are performing the LipoSelection procedure and are available for interview!
Call to obtain their names, discuss story topics, or to learn more about this unique procedure that combines patented technology and advanced surgical techniques to achieve optimal results.
